Tertiary Foraminiferal Localities in the Cape Flattery Area,
Northwestern Olympic Peninsula, Washington

by

P. D. Snavely, Jr.¹, W. W. Rau², and D. J. Hafley¹

The biostratigraphic framework for the Tertiary strata mapped by Snavely and others (1986) in the Clallam Bay, Cape Flattery, Lake Pleasant, and Ozette Lake 15-minute quadrangles is based chiefly upon age determinations made by Rau (see Snavely and others, 1980) from his study of foraminifers. Although these mainly bathyal Tertiary sedimentary rocks generally contain sparse foraminifers, they indicate that the rocks range in age from early Eocene to early Miocene. Most of the samples were collected along river beds or in logging road cuts where the rocks are the least weathered. Nevertheless, most of the samples collected south of the Crescent Thrust Fault were barren, as these strata are structurally complex and have suffered secondary alteration.

The foraminiferal slides prepared by Rau for this area are part of the U.S. Geological Survey, Pacific Northwest Foraminiferal Reference Collection which presently is housed in the Division of Geology and Earth Resources, Olympia, Washington. Rau's assignments of foraminiferal assemblages to Eocene stages of Mallory (1959), Eocene and Oligocene stages of Schenck and Kleinpell (1936), and Oligocene and Miocene stages of Kleinpell (1938) are contained in published and written communications during the period 1969 to 1985.

Tables list the field and reference collection number for each sample and sample location by latitude and longitude. The tables are grouped under the new 1984 U.S. Geological Survey 7-1/2-minute quadrangles; the relationship of these quadrangles to the old 1956 and 1957, 15-minute quadrangles is indicated. The age and/or foraminiferal stage assignments by Weldon Rau are shown as well as the reliability of each age determination (call). Symbols listed under "call" are: G, good; F, fair; ?, questionable. The depositional environments (paleoenvironments) indicated by the foraminiferal assemblages are presented for most samples.
